

## Graphited Penetrating and Release Oil

Eezit is designed as a quick penetrant and is ideal for the rapid release of tight fitting nuts, bolts, parts and equipment. Eezit acts as a rapid penetrant and quick release agent. Eezit also provides long term residual lubrication coupled with an excellent dewatering action, preventing corrosion and resisting future seizing of components.

### Advantages

- ▲ Long term residual lubrication
- ▲ Penetrating and rapid release agent
- ▲ Can be used for de-watering applications
- ▲ Wide range of industrial, agricultural and automotive applications

### Typical applications

- ▲ Eezit can be used to release tight or corroded nuts, bolts, splines, linkages, shafts, bearings and hinges in a wide range of industrial, agricultural and automotive applications.
- ▲ Whilst Eezit is particularly suited to metallic components it also has wide ranging applications on heavy duty plastics and composite materials. Due to the sensitive nature of some plastics, rubbers and composites it is advised that compatibility with the material is checked prior to application, Arrow Technical Services will advise accordingly.

### Application instructions

Apply Eezit directly onto affected part by brush, can or spray. Allow 2 minutes penetration and then release component by alternately tightening and releasing the component taking care not to shear or 'round' nuts and bolts etc.

Heavily corroded or tightly bound components may require 10-15 minutes penetration time prior to release.

**Note:** Do not apply Eezit directly to hot surfaces.
