

Super Slaks

Penetrating fluid with graphite

SUPER SLAKS aerosol Super Slaks' unique penetrating action aids dismantling of any seized or corroded bolts, nuts, components or assemblies. A combination of fast penetrating solvents and low viscosity oils utilise capillary action to rapidly penetrate tight and corroded threads. This reduces release torque, aids dismantling of components and prevents damage to nuts bolts studs and threads.

Advantages

- ▲ Rapidly penetrates corroded and seized, nuts, bolts and studs, easing release and preventing shearing.
- ▲ Contains mineral oils, oxidised waxes and colloidal graphite.
- ▲ Powerful heavy duty release agent.
- ▲ Suitable for use in mechanical, maintenance and repair applications.
- ▲ Film remains effective up to 150°C.

Typical applications

- ▲ Ideal for use in all areas to aid routine maintenance and repair of components, machinery, vehicles, plant and heavy equipment.
- ▲ Suitable for use on most metals.
- ▲ Super Slaks can be used on tight or corroded nuts and bolts, studs, linkages, splines, tapered shafts, hinges, bearings, farm and industrial equipment etc.

Application instructions

Do not spray onto hot surfaces or in the vicinity of naked flames or other sources of ignition.

Spray liberally onto affected components and allow to penetrate. For optimum penetration position the component to reduce run off and to allow gravity to aid penetration.

Suitable penetration is normally achieved in one minute but for large or very tightly seized threads allow up to 10 minutes contact time.

Use tightening movement to crack rust, then release.

Penetrating fluid with graphite

Technical data

APPEARANCE	Grey/black fluid
ODOUR	Solvent
SOLUBILITY	Insoluble in water
FLASHPOINT (°C) (CONC)	-10 CC (Closed cup)
SG (CONC)	0.86
PROPELLANT	Hydrocarbon
PACK SIZE	400ml aerosol

Health and safety, storage and precautions

Refer to Safety Data Sheet (available on request)
