ARROW RAIL SOLUTIONS

Arrow has been supplying the rail industry for over 45 years, focusing on the areas of mechanical and electrical maintenance, cleaning and specialist seasonal requirements.

Train and tram operating companies, network and infrastructure providers and service facilities of all types rely on Arrow products to get the job done.

Whether clearing a station platform of hazardous ice, cleaning heavily soiled bogies for inspection or removing unsightly graffiti and chewing gum – we have the solution.

Our trained staff work closely with customers to identify best practice and the maximum opportunity for cost savings, from simply adjusting a cleaning schedule to the installation of a new wash plant.

Many of our products carry Scientifics approvals and Arrow is Linkup accredited. Siemens, SABIC, Gaz Group, Cummins, Kuwait Oil Company and BAE Systems among many others.

EXTERIOR CLEANING

Clean, gleaming carriages make a markedly different impression on the rail user than those with a dirty, faded finish.

The operating company's livery is on display too, or perhaps not in the case of very dirty trains. Achieving best practice in train washing carries many challenges.

For example how to deal with a wide variation of soiling and staining from brake dust residues, through to heavy greases and oils to simple water marks or how to identify the best washing technique and equipment for the job.

INTERIOR CLEANING

No passenger wants to spend either their morning commute or a long distance journey surrounded by graffiti, chewing gum residues and nasty odours.

Onboard preparation of food that is then consumed in all corners of the train only adds to the problem, meaning effective cleaning and sanitising throughout is a critical task.

The implementation of a well-planned cleaning schedule using products with maximum efficiency is the answer to meeting passenger expectations while fully controlling cost.

MAINTENANCE

Planned maintenance from daily checks through to programmed component replacement is an essential aspect of the rail industry.

Safety is the first priority. The correct choice of which maintenance chemicals to use can both dramatically decrease the level of hazard to workers directly and the risk of accidents.

Minimal environmental impact and ensuring the work is completed on time are other key considerations. Fully environmentally compliant products that work first time every time allow engineers to concentrate on the job and meet deadlines.

WINTER SOLUTIONS

Few factors affecting rail operations are as unpredictable as the weather, and few have as much potential to cause delays and incur costs.

Winter conditions in particular yield many challenges, not just the need to keep trains and track clear of ice and snow but also keeping passengers and staff safe on icy surfaces.

Other times of the year pose different problems yet train services are expected to run uninterrupted throughout. Talk to Arrow to discover how our capability for innovation can solve the problems the weather throws at your network.

Setting the Standard

Arrow Solutions is a leading manufacturer of professional industrial cleaning and maintenance chemical products.

With a worldwide customer base, our high quality aerosols and liquids are solving problems for thousands of companies every day, and our reputation for innovation and manufacturing excellence is recognised through numerous awards, accreditations and OEM approvals.

Our focus on supplying exceptional products and a commitment to outstanding service ensure that we find the right solution for even the most complex challenges. In response to the challenge of achieving consistently high performance against a background of ever tighter regulation, more professionals trust Arrow to deliver on our promise to set the standard in cleaning and maintenance.

Arrow Solutions, Rawdon Road, Moira, Swadlincote, Derbyshire, DE12 6DA, England.
